

**HAZARD ZONATION**

- LOW HAZARD**  
Area with no sign of recent activity and low probability of failure within the lifetime of the property at risk.
- MEDIUM HAZARD**  
Area with recent slope movements but largely inactive at present. Moderate probability of failure in response to abnormally large rainfall events within the lifetime of the property at risk.
- HIGH HAZARD**  
Area with active slope processes with relatively large displacements. High probability of continued movement within the life time of the property at risk.

**Notes:**

Based upon Jacobs Slope Stability Review drawing ref.C42820/2013/C rev C dated November 2013.

**PROJECT:**  
PANTTEG LANDSLIP

**Scale:** 1:5,000 (approx.) at A3
